2. With regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of:
  - a. type of material  
☐ a sequence listing  
☐ table(s) related to the sequence listing
  - b. format of material  
☐ in written format  
☐ in computer readable form
  - c. time of filing/furnishing  
☐ contained in the international application as filed.  
☐ filed together with the international application in computer readable form.  
☐ furnished subsequently to this Authority for the purposes of search.
3. ☐ In addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

The claimed invention relates to an optical film comprising an optically structured layer; and a damage prevention layer.

Documents are cited in the International Search Report:

D1: KR 2002-0069110 A  
D2: KR 2003-0077472 A  
D3: US 2002/012169 A1  
D4: US 2003/180529 A1

According to the present invention, essential technical features of the invention are as follows.

- a) A damage prevention layer is formed on the second surface of the optically structured layer.
- b) A damage prevention layer is composed of a transparent polymeric material and a plurality of spherical organic or inorganic particles distributed in the transparent polymeric material.
- c) A damage prevention layer has protruding surface portions which are formed by the spherical organic or inorganic particles protruding from the transparent polymeric material.

Claims 1-14 are not considered to involve an inventive step.

D1-D4 disclose the advantage that the prism structure and the opposite surface of the optical film are prevented from damage due to the external impact, vibration and friction because of a damage prevention layer. Furthermore D1-D4 obviously describe the above the features a), b) and c). Although D1-D4 do not directly disclose the features: (c) a plurality of three-dimensional structures are formed on the first surface; and (d) the protruding surface portions of the damage prevention layer are formed to have a height corresponding to 50% or less of the diameter of the spherical particles, the above features (c) and (d) belong to the subject matter that would have been obvious to a person skilled in the art through D1-D4.
